

BigFoot Sightings

Link to data and documentation: <https://data.world/timothyrenner/bfro-sightings-data>

About Dataset

The Bigfoot Field Researchers Organization (BFRO) - www.bfro.net - is an organization dedicated to investigating the bigfoot / sasquatch mystery. This dataset contains sighting data publicly available on the BFRO website in a more digestible form.

There are three files:

1. `bfro_report_locations.csv` - tabular geocoded reports
2. `bfro_reports.json` - full text reports in line-delimited JSON.
3. `bfro_reports_geocoded.csv` - combined and cleaned version of the report locations and full text reports.

See the changelog below for the collection times.

Reports

The most useful file in the dataset is probably `bfro_reports_geocoded.csv`.

It contains the most relevant fields in the full reports joined against the report locations, and also now contains the weather conditions the day of the sighting.
